01 Introduction

Vision, purpose, and foundations of the ecosystem

World Button (WMT) is a decentralized utility token born from the vision of an ecosystem where global competition, philanthropy, and the digital economy converge in a single click.

Powered by the collective strength of its holders, WMT serves as the incentive engine of the **WorldClick** platform — a skill and endurance-based game where users represent their countries in a continuous worldwide competition.

The project was conceived to address a gap observed in the *play-to-earn* market: excessive reliance on chance mechanisms and the absence of measurable social impact. WorldClick proposes to invert this paradigm, creating an economy where time, strategy, and individual effort translate into tangible value, while simultaneously generating real contributions to global causes.

Fundamental note: WMT is a utility token designed exclusively for interaction with the services and game mechanics within the WorldClick platform. It does not represent shares, equity, or ownership rights in any entity. It is not a financial instrument, a referenced asset (ART), or electronic money (EMT).

Guiding Principles

Effort-Based

Rewards directly proportional to individual and collective performance. No chance mechanisms or gambling elements exist.

Integrated Social Impact

Philanthropy is not an add-on — it is the core of the ecosystem. Each season generates concrete donations to democratically selected NGOs.

Total Transparency

All transactions, votes, and prize distributions are recorded on-chain, accessible and auditable by any participant.

Economic Sustainability

Deflationary mechanisms and bonding curves ensure token stability and longevity, protecting players over the long term.

02 Ecosystem & Game Mechanics

How the WorldClick platform works

WorldClick is not a game of chance. It is an ecosystem built on effort, strategy, and community participation.

The platform operates in continuous seasonal cycles, where players from around the world compete representing their nations. Each click contributes both to the personal score and to the country's collective ranking. At the end of each season, the nation with the most points is crowned world champion.

Ecosystem Pillars

Global Seasons

Players click to add points to their personal score and their country's ranking. At the end of each season, the nation with the most points is crowned champion. Seasons are timed, creating rhythm and anticipation within the community.

Weekly Tournaments

Optional tournaments with independent prize pools. Users sign up to prove their skill and take home a share of the loot. Tournaments introduce strategic variables — temporary multipliers, daily challenges, and streak bonuses — that reward consistency.

Progression Through Effort

Players unlock click multipliers, daily streaks, and exclusive cosmetics through pure activity. There are no paid shortcuts that replace time invested. Progression is meritocratic.

Technical Architecture

Game Layer

Responsive frontend with real-time synchronization via WebSockets. Each click is validated server-side to prevent bots and ensure fair play.

Governance Layer

Token-weighted voting system for selecting beneficiary NGOs and ecosystem improvement proposals.

Blockchain Layer

Smart contracts on Solana manage reward distribution, NGO voting, and burn mechanisms. Low transaction cost and high speed.

Liquidity Layer

Initial pool on Raydium with a bonding curve to prevent excessive concentration and ensure equitable distribution.

03 Integrated Philanthropy

Social impact as the engine of the ecosystem

*Social impact is the **core** of WorldClick. It is not a secondary feature — it is the reason the project exists.*

In each season, a significant percentage of the prize pool is directed to non-governmental organizations (NGOs) selected by the community itself. This mechanism transforms every click into an act of global contribution: by competing, the player is simultaneously funding real causes.

15%

Donation Per Season

Of each seasonal prize pool is allocated to beneficiary NGOs, creating a continuous flow of philanthropic funding.

Voting Mechanism

Beneficiary organizations are selected democratically by the players themselves through a transparent voting system, using WMT tokens as the participation medium. This model ensures that the community decides where impact is most needed.

Selection Process:

1. **Proposal:** Any WMT holder can propose an eligible NGO, provided it meets criteria of financial transparency and measurable impact.
2. **Validation:** The WorldClick team verifies the organization's eligibility (legal registration, activity reports, absence of conflicts of interest).
3. **Voting:** WMT holders vote in a weighted manner during a 7-day window. Vote weight is proportional to WMT balance + current season score.

4. **Execution:** The donation is executed on-chain, with publicly verifiable proof-of-donation.

Transparency and Accountability

All donations are recorded on the Solana blockchain, creating an immutable and auditable registry. Quarterly impact reports are published on the platform, detailing how funds were used and what concrete results were achieved.

Playing on WorldClick not only rewards the user — it generates **real-world impact**.

04 Player Rewards & Economy

How WMT rewards ecosystem contribution

WMT rewards those who contribute most to the ecosystem, creating an economy where time and effort have *tangible value* within the game.

Tiered Reward System

Top performers from the winning country receive WMT rewards, distributed through a tiered system that rewards consistency. Distribution is not linear — players who maintain high performance throughout the entire season are relatively more benefited than isolated peak performances.

TIER	POSITION	% OF POOL	PRIMARY CRITERION
Tier S	Top 1%	35%	Total score + weekly consistency
Tier A	Top 5%	30%	Total score + tournament participation
Tier B	Top 15%	20%	Total score
Tier C	Top 40%	10%	Minimum contribution + daily streak
Community	Remaining	5%	Draw among active participants

No Gambling

There are no chance mechanisms as a determining factor in main rewards. Rewards are strictly proportional to performance, tournament participation, and utility provided to the ecosystem. The only random element (5% of the pool for the community) serves as an incentive for base participation, not as the main distribution mechanism.

Token Utility

Cosmetics

Skins, badges, and exclusive visual effects purchasable in the internal store with WMT. Purely aesthetic items that do not affect gameplay.

Multipliers

Temporary score boosts purchasable with WMT, accelerating progression within the rules of the game.

Governance

Voting on improvement proposals and selection of beneficiary NGOs. Voting power weighted by WMT balance.

Tournament Fees

Entry into weekly tournaments with independent prize pools. A portion of fees is burned, a portion goes to the pool.

05 Tokenomics

Sustainable and deflationary economic design

WMT is a token designed to maintain a sustainable long-term ecosystem, protecting token utility for its players.

Technical Specifications

PARAMETER	VALUE
Blockchain	Solana (SPL Token)
Liquidity Launch	Raydium DEX
Token Standard	SPL (Solana Program Library)
Emission Model	Fixed with deflationary mechanisms
Automatic Burn	Variable percentage per internal transaction

Deflationary Design

WMT's sustainability rests on three deflationary pillars that work together to control circulating supply and maintain organic buying pressure:

Seasonal Halving

Player rewards are progressively reduced with each new season, following a predefined decay curve. This mechanism controls reward inflation and incentivizes early participation, while preserving value for long-term participants.

Activity-Based Burn

A percentage of WMT used in specific in-ecosystem transactions — cosmetic purchases, tournament fees, multiplier activation — is permanently burned. The more activity on the platform, the greater the deflationary pressure.

Bonding Curve

Implemented to balance liquidity and prevent excessive accumulation by a few users. The curve ensures a more equitable distribution, slightly penalizing bulk purchases and benefiting gradual acquisition.

Supply Distribution

Initial Liquidity

Reserved for the launch pool on Raydium, ensuring price stability and accessibility from day one.

Game Rewards

Allocated for seasonal distribution to players over multiple seasons, subject to the halving mechanism.

Development Reserve

Destined for the team and continuous platform development, with a 24-month vesting period and quarterly cliffs.

Community Treasury

Managed by decentralized governance to fund partnerships, marketing, and community-proposed initiatives.

06 Roadmap

Planned evolution of the WorldClick ecosystem

WorldClick's development follows a phased approach, with clear delivery milestones and market validation before each transition.

PHASE 1 — Q3 2026

Genesis & Launch

Smart contract deployment on Solana, liquidity pool creation, and base game launch (clicks and rankings). Establishment of the inaugural community and first 3 competition seasons.

PHASE 2 — Q4 2026

Tournaments & Philanthropy

Activation of the first weekly tournaments, implementation of the NGO voting system, and execution of the first on-chain philanthropic donation. Launch of the country ambassador program.

PHASE 3 — Q1 2027

Cosmetics & Multipliers

Launch of the internal marketplace where players can redeem WMT for visual upgrades and game multipliers. Introduction of limited-edition seasonal cosmetic NFTs.

PHASE 4 — Q2 2027

Global Expansion

Integration of new game mechanics, optimization of the deflationary curve, and partnerships with global brands and international NGOs. Exploration of cross-chain integrations.

Phase Transition Criteria

Each phase is only considered complete when the following adoption and stability criteria are met:

Adoption Metrics

Minimum number of daily active players, WMT transaction volume, and weekly retention rate

Technical Stability

Zero critical vulnerabilities in audits, platform uptime above 99.5%, and average incident

established as gateways between phases.

resolution time under 4 hours.

07 Legal Notice & Compliance

Regulatory framework and legal nature of the token

Nature of the Token

WMT is a **utility token** designed exclusively to interact with the services and game mechanics within the WorldClick platform. WMT does not represent shares, equity, or ownership rights in any entity. It is not a financial instrument, a referenced asset (ART), or electronic money (EMT) under the European regulatory framework.

Possession of WMT does not guarantee economic returns outside the gaming ecosystem. The token's value derives solely from its utility within the platform — acquisition of digital goods, participation in governance, and access to exclusive features.

Regulatory Framework

The token structure, its deflationary mechanics, and the launch have been designed with the **European regulatory framework (MiCA — Markets in Crypto-Assets)** and **CNMV (Comisión Nacional del Mercado de Valores)** guidelines in mind, operating under the applicable exceptions for utility tokens and skill-based video game rewards.

WorldClick is classified as a *skill-based game*, not subject to gambling regulations in jurisdictions where the distinction is legally recognized. Rewards are determined by meritocratic performance, not by chance.

Risk Warning

Participation in the WorldClick ecosystem involves risks, including but not limited to: token price volatility, technological risks associated with blockchains, constantly evolving regulatory risks, and risk of total loss of invested value. Participants should conduct their own due diligence and never invest more than they can afford to lose.
