

# BOTÓN MUNDIAL

Official Whitepaper — WMT Token

The token that turns every click into global impact.

Solana SPL

Skill-Based

MiCA Compliant

## 1 Introduction

**Botón Mundial (WMT)** is a decentralized utility token born from the vision of an ecosystem where global competition, philanthropy, and the digital economy converge in a single click. Powered by the collective strength of its holders, WMT serves as the incentive engine of the **WorldClick** platform — a skill and endurance-based game where users represent their countries in a continuous worldwide competition.

## 2 Ecosystem & Game Mechanics

WorldClick is not a game of chance; it is an ecosystem built on **effort, strategy, and community participation**.

### Global Seasons

Players click to add points to their personal score and their country's ranking. At the end of each season, the nation with the most points is crowned champion.

### Weekly Tournaments

Optional tournaments with independent prize pools. Users sign up to prove their skill and take home a share of the loot.

### Progression Through Effort

Players unlock click multipliers, daily streaks, and exclusive cosmetics through pure activity.

## 3 Integrated Philanthropy

Social impact is the **core** of WorldClick.

15%

of each season's prize pool donated to NGOs

Beneficiary organizations are democratically selected by the players themselves through a transparent voting system, using WMT tokens as the participation medium. Playing on WorldClick not only rewards the user, but generates **real-world impact**.

## 4 Player Rewards & Economy

WMT rewards those who contribute most to the ecosystem, creating an economy where time and effort have **tangible value** within the game.

Tiered System

No Gambling

Top performers from the winning country receive WMT rewards, distributed through a tiered system that rewards consistency.

No chance mechanisms. Rewards are strictly proportional to performance, tournament participation, and utility provided.

## 5 Tokenomics

WMT is a token designed to maintain a sustainable long-term ecosystem, protecting token utility for its players.

BLOCKCHAIN

**Solana** (SPL Token)

LAUNCH

**Raydium** Initial Liquidity

### Deflationary Design

#### Season Halving

Player rewards are reduced with each new season, controlling inflation.

#### Activity-Based Burn

A percentage of WMT used in specific in-ecosystem transactions (cosmetic purchases or tournament fees) is permanently burned.

#### Bonding Curve

Implemented to balance liquidity and prevent excessive accumulation by a few users, ensuring a more equitable distribution.

## 6 Roadmap

Phase 1: Genesis & Launch

Smart contract deployment on Solana, liquidity pool creation, and base game launch (clicks and rankings).

### ● Phase 2: Tournaments & Philanthropy

First weekly tournament activation, NGO voting system implementation, and execution of the first charitable donation.

### ● Phase 3: Cosmetics & Multipliers

Launch of the internal marketplace where players can redeem WMT for visual upgrades and game multipliers.

### ● Phase 4: Global Expansion

Integration of new game mechanics, deflation curve optimization, and partnerships with global brands and NGOs.

## 7 Legal Notice & Compliance

WMT is a **utility token** designed exclusively to interact with the services and game mechanics within the WorldClick platform. WMT does not represent shares, equity, or ownership rights in any entity. It is not a financial instrument, a referenced asset (ART), or electronic money (EMT).

Possession of WMT does not guarantee economic returns outside the gaming ecosystem. The token structure, its deflationary mechanics, and the launch have been designed with the **European regulatory framework (MiCA)** and **CNMV** guidelines in mind, operating under the applicable exceptions for utility tokens and skill-based video game rewards.
